                                                                                                                                                                          J. Bacteriol. 182:3688-3692(2000)
1- FUNCTION: Acts on oxaloacetate, sulfopyruvate but not on pyruvate.
Has a higher selectivity for the coenzyme NADH than for NADPH.
-!- CATALYTIC ACTIVITY: (S)-malate + NAD(P)(+) - oxaloacetate +
                                                                                                                                                                                                                                                                                                                           Graupner M., Xu H., White R.H.; "Identification of an archaeal

PROBABLY IDENTICAL WITH THE SE DETECTABLE MALE ANTIGHN (SDM).

TISSUE SPECIFICITY. HIGHLY EXPRESSED IN TESTIS. THE FOUND IN SPERMATIDS DURING SPERMATOGENESIS. NO EXPENDED CELLS, SPERMATOGONIA, OR SPERMATOCYTES.

SIMILARITY: HIGH. TO HUMAN GOLGIN-150.

CAUTION: IT IS UNCERTAIN WHETHER MET-1, MET-19 OR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the BH3 domain of human BAK. The invention relates to a bcl homology domain 3 (BH3 domain), derived from a proapoptotic member of the BCL-2 family. The BH3 polypeptide can be used in a method for promoting apoptosis in a BH3 polypeptide can be used in a method for promoting apoptosis in a target cell, especially where the cell is a cancer cell a virus infected cell or an autoantibody producing cell. The BH3 polypeptide can be used in therapeutic compositions for treating disease including cancer, other lymphoproliferative conditions, arthritis, inflammation, and autoimmune diseases, which may result from the down regulation of cell death
                                                                                                                                                                                                                                      New peptide conjugates for modulating apoptosis or for inhibiting cell lymphoma/leukemia 2 (Bel-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 1999-255058/21

The invention relates to a peptide conjugate having the formula:  $(R-X)_{n}$ -peptide where n=1-10; x=C=0, when the R-X group is att to the N-terminus of the peptide, or a side chain of the peptide the functional group of the side chain is NH2 or OH; or X=0 or when the R-X group is attached to the C-terminus of the peptide.

cs side chain of the peptide, where the side chain functional group is COOH CONH2; and R = 2.48C alkyl or alkoxy, 2-14C alkylenyl containing one CC or two double bonds; cyclobutyl, cyclobentyl, cyclobentyl optionally CC monosubstituted with a 1-5C straight or branched chain alkyl group, person of the peptide with a 1-5C straight or branched chain of the conjugate. The peptides represent examples CC alkyl group, or benzyl. The peptides with a 1-5C straight or branched chain of the conjugate. The peptides represent analogues of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of the BH3 domain of the cell death agonist Bad. The peptide conjugate is useful for modulating apoptcais in the cells of a subject or for creversing B cell lymphoma/leukemia 2 (Bcl-2) mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 function. In particular, the peptide conjugate is useful for treating a cubject afflicted with a cancer characterized by cancer cells that express Bcl-2. The cancer includes prostate, colorectal, gastric, conjugate is also useful for treating disorders characterized by cancer cells that conjugate is also useful for treating disorders characterized by cancer cells that conjugate is also useful for treating disorders characterized by cancer cells that conjugate is also useful for treating disorders characterized by cancer cells that conjugate is also useful for treating disorders characterized by cancer cells conjugate is also useful for treating disorders, acquired conjugate is also useful for treating disorders characterized by cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer cells cancer c

The present sequence was used in an example illustrating an invention relating to an antimycin derivative which modulates apoptosis by binding to a Bcl-2 family protein and preferentially induces apoptosis in a cell which over-expresses the Bcl-2 family protein. The antimycin derivative is used in treating an apoptosis-sasociated disease and for inducing apoptosis. It is also useful for treating neoplasia and drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mammalia

The present sequence binds to the hydrophobbo pocket of Bcl-2. A competitive binding assay was used to determine if the site of antimycin A3 interaction was the hydrophobic pocket of Bcl-2.
                                                                                                                                            The present sequence is the mammalian Bak Bcl-2 homology domain 3 (BH3) domain, which was used in a sequence alignment with the same domain of a putative version of the mammalian apoptosis regulator BBC3, which was designated BBC3-ORF2. The BBC3 protein, nucleic acids and antibodies are suitable for use in promoting cell death or for preventing apoptosis in malignant cells and those cau
                                                                                                                                                                                                                                                        Novel polynucleotide encoding a BBC3 protein which is useful for modulating apoptosis, especially in the treatment of cancer and autoimmune diseases .

                                                                                                                                                                                                                                                                                            The present invention describes an isolated or synthetic polypeptide (I) comprising a less than full length amino acid sequence of a mutant BCL-XL/BCL-2 associated cell death regulator polypeptide (BAD) or its creament, which contains amino acid substitutions at Seril8 of a human CC BAD, Seril5 of a murine BAD (longer murine BAD) or Seril3 of a murine BAD (longer murine BAD) or Seril3 of a murine DAD (longer murine BAD) or Seril3 of a murine not proper murine BAD) or Seril3 of a murine CC antiarthritic, antiinflammatory and immunosuppressive activities, and can be used as an apoptosis inducer or inhibitor. BAD polypeptides and creative that promote cell survival or apoptosis. Other uses include conductory or inhibitors apoptosis of the compounds of conductory or inhibitors apoptosis. Other uses include conductory or inhibitors apoptosis in a cell. Candidate compounds inducer or inductory or inhibitors apoptosis in a cell. Candidate compounds induced of catcolity that promote cell survival or apoptosis. Other uses include inducting or inhibiting apoptosis in a cell. Candidate compounds induced fictions of the death, wound healing, cancer, viral infections, close the conditions and consensus sequence represents a Bcl-family member autoimmune diseases. The present sequence represents a Bcl-family member consensus sequence which is used in an example from the

CC (R-X)n-peptide where n = 1-10; X = C=0, when the K-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide where ct the functional group of the side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain side chain alkyl group is COOH CC or two double bonds, cyclobutyl, cyclopentyl, cyclobatyl petionally group, or bends, cyclobatyl, cyclopentyl, cyclopentyl containing one CC of the peptide did in a 1-5C straight or branched chain alkyl group, or benzyl. The peptides ABB37001-837058 represent examples CC of the peptide portion of the conjugate and the special strain and confer chain alkyl group, or benzyl. The peptide corresponding to amino acids 72-97 of CC the BH3 domain off the cell death agonist BEd. The peptide conjugate is cuseful for modulating apoptosis in the cells of a subject, or for creversing B cell lymphoma/leukemia 2 (BCl-2) mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bel-2 confusion. In particular, the peptide conjugate is useful for treating a concer concer cells. The peptide conjugate is subject afflicted with a cancer characterized by cancer cells that acroes Bel-2 and the peptide conjugate is subject to subject afflicted with a cancer characterized by cancer cells that conjugate is also useful for treating a subject or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating a group or conjugate is also useful for treating a group or conjugate is also useful for treating a group or conjugate is also useful for treating a group or conjugate is also useful for treating a group or conjugate is also useful for treating a group or conjugate is also useful for treating a group or conjugat

                                                                                                                                                                                                                                                                   The term GD domain refers to a protein domain first identified in Bak and shown to be essential for the interaction of Bak with Bcl-x(l) and for Bak's cell killing function; and to peptides and/or molecules capable of minicking its structure and/or function. The present sequence represents a GD domain corresponding to amino acid residues 67-94 of Bak. An antibody raised against a GD domain may be used to screen a common corresponding to amino acid residues 67-94 of immunocrossreactive proteins. Fruncated GD domain peptides have been shown to maintain the protein binding and cell killing function exhibited by wild type Bak. These molecules may induce apoptides have carbibited by wild type Bak. These molecules may induce apoptosis in tumours. 4.9. follicular lymphoma, which depend on high levels of Bcl-2 for their continued growth and survival. GD domain mimetics that inhibit Bcl-2 may be selectively toxic to of Bcl-2 for their continued growth and survival. GD domain mimetics of infected cells.
                                                                                                                                                                         Query Match

A nucleotide sequence encoding Bak-delta2-TM was obtained from cDNA by PCR and cloned as an in-frame fusion to the GAL4-TNA binding domain in vector pAS2-1. The construct was used in a two-hybrid screen of human heart cDNA for the identification of clones encoding Bak binding proteins. The invention relates to a novel Bak binding protein (BBP, see AAW7537), the gene encoding (see AAW51499), methods for detecting substances that alter the specific binding breveen Bak and BBP, as well as diagnostic and therapeutic methods utilising BBP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cell

Deletion of the N-terminal 70 amino acids of Cdn-1 improved this activity, suggesting that small, truncated Cdn-1 molecules may be potent therapeutics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid sequences encoding cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injur

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                   Cdn-1 cDNA was isolated from a human heart cDNA library using a previously isolated clone as probe. Recombinant Cdn-1 was produced in Sf9 and human colon adenocarcinoma HT29 cells. Expression of Cdn-1 in WT-LZ lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Ras-mediated apoptosis. Deletion of the W-terminal 59 amino acids of Cdn-1 only slightly decreased this activity, suggesting that small, truncated Cdn-1 molecules may be potent therapeutics.
                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid sequences encoding Cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Barr

                                                                                                                                                                                                                                   Cdn-2 cDNA was isold from a human placental genomic library using a 950 bp fragment of Cdn-1 cDNA. Expression of Cdn-2 in mouse progenitor B-cell FL5.12 cells decreased IL-3-induced apoptosis. The Cdn-2 protein displayed 97% amino acid identity with Cdn-1 (AAR77876).
                                                                                                                                                                                                                                                                                                                         New nucleic acid sequences encoding Cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury

This Bak protein sequence represents a bcl-1 homologue which interacts with Epstein-Barr virus (EBV) early lytic cycle BHRF1 protein, and is capable of modulating apoptosis. The protein may be used in complete or partial form, or as an epitope tag fusion protein, an anew virucide drug screening method, which involves combination of Bak protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELTSA. Interaction of Bak and viral proteins allows viral replication or latency in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or inhibit the interaction may be used as virucide, antitumour or

                                                                                                                                                                                                                                                 This Bak-2 protein sequence represents a bol-1 homologue which interacts with Epstein-Barr virus (EBV) early lytic cycle BHRF1 protein, and is capable of modulating apoptosis. The protein may be used in complete or partial form, or as an epitope tag fusion protein, in a new virucide drug screening method, which involves combination of Bak-2 protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak-2 and viral proteins allows viral replication or latency in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or diagnostic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Screening for anti-viral agents - by detecting the ability of an agent to disrupt the interaction of a Bak protein and a viral protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 1996-485886/48.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       length: 0
